SPC FLOORING

0 FORMALDEHYDE

NOT AFRAID OF BEING SOAKED IN WATER

INGREDIENT CHART

- HIGH DEFINITION WOOD GRAIN
- LOCK INSTALLATION
- STABLE AND DURABLE
- APPLICABLE FLOOR HEATING
- 360° GRADE
- SEAMLESS SPLICING

PRODUCT INFORMATION

PRODUCT NAME: NEW MATERIAL SPC STONE PLASTIC FLOORING

PRODUCT SIZE : 1150MM*183MM

PRODUCT THICKNESS :4MM/5MM/6MM/8MM/12MM

UV ANTI-FOULING LAYER

The surface of the base material layer is coated with UV-curable anti-fouling paint. After wiping off stains, there is no residue, with high transparency and high hardness.

WEAR-RESISTANT LAYER

It is processed with high-density thickening wear-resistant and stabilized through wear-a hundred procedures.

HIGH-DEFINITION COLOR FILM LAYER

Reproduce the real patterns, with vivid, simple and beautiful colors.

SUBSTRATE LAYER

It is processed with high-density thickening wear-resistant and stabilized through wear-a hundred procedures.

BASE MATERIAL STABILIZING LAYER

Thermoplastic adhesive that is resistant to temperature and heat, solvent-free and non-volatile, and can withstand short-term high temperatures in the process screen.

NGREDIENT CHART

FIREPROOF AND FLAME-RETARDANT

A1 grade fire resistance, second only to stone in fire resistance rating.

ANTI-SLIP

It becomes rough when exposed to water, reducing the probability of slipping and getting injured

WEAR-RESISTANT

Unafraid of daily wear and tear

WATER IMMERSION TEST

Ice-sided waterproof, no curling edges, no deformation

SNAP BUTTON DETAIL DISPLAY

Tight, seamless and waterproof

NO ADHESIVE BINDING REQUIRED

Healthy, environmentally friendly and pollution free

SUPER REASSURING

ABOUT PRODUCT

We ensure that the quality of each product reaches the leading level in China. To avoid installation and after-sales problems, please install and use it correctly and in a standardized manner!

Correct and standardized installation and use

1. When installing, please be sure to leave an expansion gap of 8mm to 12mm or more around the wall. When the floor is laid on the ground, please use a flat cement cable for finishing. It is recommended to use white, French and small-grain water-resistant putty for caulking.

2. Do not forcibly strike when the groove is not in the right position!

3. The ground should be relatively flat. Do not install or use it when there are significant undulations and drops. (It is recommended to use self-leveling cement for leveling.)

4.SPC is an indoor floor and must not be installed in places exposed to direct sunlight

5. The floor laying area should have a longitudinal and transverse span of 15 to 15 meters. If the laying span is too long, please use accessory partitions before installation. (For partition accessories, it is prohibited to use hard glass adhesives such as non-hole rubber for fixation. Empty layers should be left for the partition.
